

# didmos 2.0

## Introduction

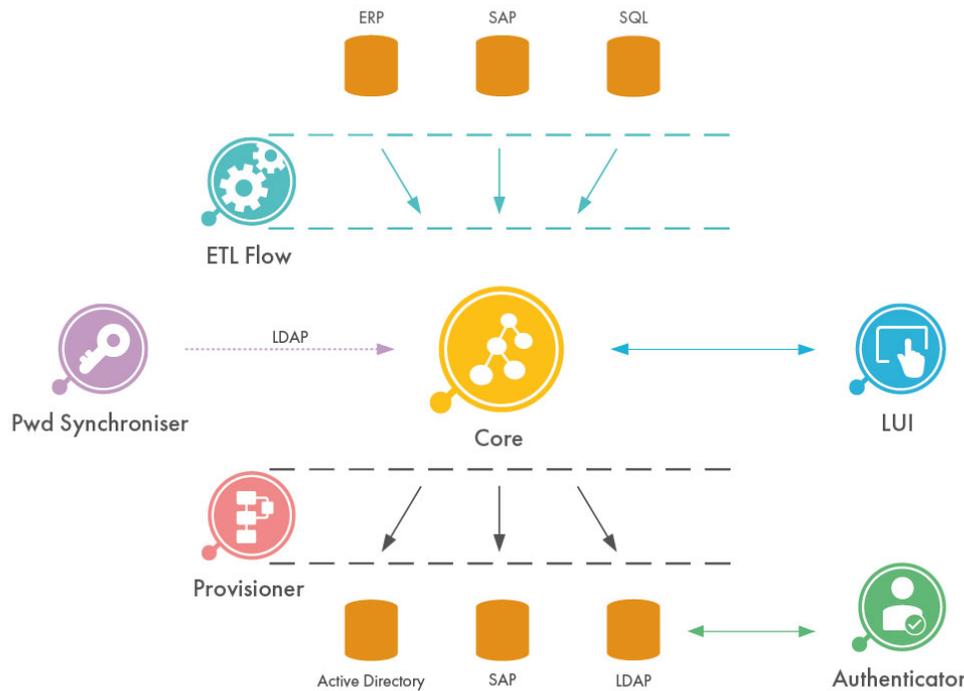

didmos is a software solution for Identity & Access Management and consists of various different modules, that can be used individually for different tasks or in combination.

For a general overview of the software solution, please refer to the following document:

Various parts of the didmos software suite have already been updated to version 2. This version is a consequent move towards a modern micro services based software architecture for the already existing didmos modules. In addition, completely new modules are provided. This documentation covers all of these modules.

## Modules

didmos V2 is made up of the following individual modules, which are illustrated above. Each module consists of a general version, which is open source and can be accessed as described below. Additionally, most modules can be extended at specific extension points to add custom functionality. A general purpose version of the frontend application (LUI) is also published as 'didmos2-demo-frontend'.

Module	Documentation	Source code	Remarks
Core	<a href="#">didmos2 Core</a>	<ul style="list-style-type: none"> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-core">https://gitlab.daasi.de/didmos2/didmos2-core</a> (Backend APIs)</li> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-openldap">https://gitlab.daasi.de/didmos2/didmos2-openldap</a> (Metadirectory)</li> </ul>	Consists of the following components: <ul style="list-style-type: none"> <li>Metadirectory (OpenLDAP)</li> <li>Backend APIs consisting of different apps:               <ul style="list-style-type: none"> <li>REST-based SCIM app</li> <li>Policy Decision Point app</li> <li>Task Management Engine app</li> </ul> </li> <li>For customer specific logic any number of additional apps with own web services interface can be added</li> </ul>
LUI	<a href="#">didmos2 LUI</a>	<ul style="list-style-type: none"> <li><a href="https://gitlab.daasi.de/didmos2-demo/didmos2-demo-frontend">https://gitlab.daasi.de/didmos2-demo/didmos2-demo-frontend</a> (Example frontend)</li> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-frontend-lib">https://gitlab.daasi.de/didmos2/didmos2-frontend-lib</a> (Library with common modules)</li> </ul>	Highly customizable Frontend architecture for implementing applications communicating with the REST-APIs of Core
Authenticator	<a href="#">didmos2 Authenticator</a>	<ul style="list-style-type: none"> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-auth">https://gitlab.daasi.de/didmos2/didmos2-auth</a> (SSO platform)</li> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-mongodb">https://gitlab.daasi.de/didmos2/didmos2-mongodb</a> (MongoDB storage layer)</li> </ul>	Consists of the following components: <ul style="list-style-type: none"> <li>SSO proxy (SAML and OIDC) based on <a href="#">Satosha</a> from the IdentityPython project               <ul style="list-style-type: none"> <li>uses MongoDB for short lived tokens</li> </ul> </li> </ul>
Provisioner	<a href="#">didmos2 Provisioner</a>	<ul style="list-style-type: none"> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-ra">https://gitlab.daasi.de/didmos2/didmos2-ra</a> (RA)</li> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-rabbitmq-worker">https://gitlab.daasi.de/didmos2/didmos2-rabbitmq-worker</a> (Worker)</li> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-connector-scim2">https://gitlab.daasi.de/didmos2/didmos2-connector-scim2</a> (Generic SCIM connector)</li> <li><a href="https://gitlab.daasi.de/didmos2/didmos2-worker-scim2-response">https://gitlab.daasi.de/didmos2/didmos2-worker-scim2-response</a> (Integration of SCIM connector for writing Provisioner responses to didmos Core)</li> </ul>	Consists of the following components: <ul style="list-style-type: none"> <li>Requesting Authority (RA)</li> <li>RabbitMQ (Queue system, see <a href="#">Dockerhub</a>)</li> <li>Worker-Nodes with ICF connectors for various target systems</li> </ul>
ETL Flow			Not yet updated to didmos V2, didmos V1 is compatible with didmos V2

<b>Pwd Synchronizer</b>		Not yet updated to didmos V2, didmos V1 is compatible with didmos V2
-------------------------	--	--

## How to get started

In addition to the source code repositories, there is also a dedicated 'compose'-repository which contains a Docker-based development environment, build pipelines and deployment instructions. The general purpose version of didmos is called didmos2-demo and its compose-repository is accessible here: <https://gitlab.daasi.de/didmos2-demo/didmos2-demo-compose>

At that location you can find details on how to setup a development environment, which currently is only fully documented for the Fedora operating system. The repository can also be used to setup a local demo environment based on pre-build docker images.

The most recent version of didmos2-demo is v2.2.0: <https://gitlab.daasi.de/didmos2-demo/didmos2-demo-compose/-/tree/v2.2.0>

Below you can find a short summary of how to setup a local demo environment. For more details and deployment scenarios, please refer to the full README: <https://gitlab.daasi.de/didmos2-demo/didmos2-demo-compose/-/blob/v2.2.0/README.md>

## Setup of a local demo environment

```
# !!!
# Make sure to understand the "General requirements" section in https://gitlab.daasi.de/didmos2-demo/didmos2-
demo-compose/-/blob/v2.2.0/README.md#general-requirements
# !!!

# Clone didmos2-demo-compose repository and change directcory
git clone -b v2.2.0 https://gitlab.daasi.de/didmos2-demo/didmos2-demo-compose.git
cd didmos2-demo-compose

# Run bootstrap script with parameters for release-branches, external Gitlab and docker environment only
make bootstrap ENV=release GIT_PROFILE=external DEPLOY=dockerOnly

# Run docker containers
make up

# !!!
# Make sure to whitelist/accept SSL certificates for
# - https://auth.daasi.devel
# - https://backend.daasi.devel
# - https://frontend.daasi.devel
# And then finally access https://frontend.daasi.devel. Login is possible with user superadmin and password
secret
# !!!
```

## Operations

Documentation for production deployment and operations is available here: [Operations](#)
